Ibex, wild goat, mountain goat

2.21 Ibex, wild goat, mountain goat

References:

Hebrew אַקּוֹ (’aqo) DEU 14:5

Hebrew יָעֵל, יַעֲלָה (ya‘el, ya‘alah) 1SA 24:3, JOB 39:1, PSA 104:18, PRO 5:19

Discussion:

Ibex (Pixabay)The wild goat found in the land of Israel is the Nubian Ibex Capra ibex nubiana. It has existed in the mountains of this region from time immemorial and until fairly recently it was a very common animal. It was and to some degree still is found in the mountainous parts of Israel the Sinai Peninsula Arabia and Egypt. A closely related species Capra walie is found in Ethiopia and Eritrea.

However the ibex is the only type of wild goat now found in Israel. One other type once lived there but disappeared in the Stone Age long before the time of Abraham. Both ya‘el and ’aqo are the Hebrew names for this animal. Thus versions such as the RSVNIVNEB and REB which include two types of wild goat in the list of clean animals in DEU 14:5 are probably not correct.

For a fuller discussion see 2.1 Clean animals.

Description:

The Nubian ibex is a fairly large wild goat, with adults being about ninety centimeters (3 feet) high at the shoulder. It is a grayish color for most of the year but turns browner in winter. Males have thick long horns over 130 centimeters (4 feet) in length which curve backwards in a semicircle. The horns of the females are much slimmer and shorter, reaching a length of only about 40 centimeters (15 inches). Only the last few centimeters of the horns are smooth, the rest being ringed with ridges. These ibexes live in small herds in the mountains and prefer cliffs and crags, where they live off the bushes that grow on the ledges. Ibex meat is moister and more tender than that of gazelle or deer, and they have been a favorite game animal for many centuries.

The “Wild Goat Rocks” mentioned in 1SA 24:2 is probably the rocky area around the pools and streams of Nahal Arugot near En Gedi. The area has been declared a nature reserve, and the ibexes and other indigenous animals are protected there. The name En Gedi itself, which means “Oasis of the Kid” or “Spring of the Kid“, probably refers to a young ibex.

Special significance or symbolism:

The ibex is closely associated with remote high mountains and in both Hebrew and Arabic culture it became viewed as the most remote of all animals (compare JOB 39:1). This is probably the reason why so many English translations render ya‘el as “mountain goat“. Although not referred to in the Bible ibexes are also known for their surefootedness on rocky ledges.

However to both of the abovementioned cultures the female ibex was a symbol of grace and beauty grace being associated with the perfect balance with which ibexes stand walk and jump on the cliff faces and beauty probably being associated with their large human-like eyes. In English and many other cultures this poses a problem in PRO 5:19, because in these cultures goats are not positive symbols of beauty. In some Tibeto-Burman cultures the wild serow goat is viewed as the ugliest of all animals. In these languages to refer to a woman as a “wild goat” would be an insult. This is the reason why the English versions have “doe” rather than “wild goat“.

Translation:

Indigenous wild goats are found in the following areas of the world:

Southeast Europe, Asia Minor, Pakistan - True Wild Goat - Capra hircus

Southwest Europe - Pyrenees Ibex - Capra pyrenaica

Alpine Europe - Alpine Ibex, Steinbok - Capra ibex

Egypt, Middle East - Nubian Ibex - Capra ibex nubiana

Ethiopia, Eritrea - Abyssinian Ibex - Capra walie

Central Asia, Siberia - Himalayan Ibex - Capra sibirica

Afghanistan, Kashmir - Markhor - Capra falconeri

Nepal, North India - Himalayan Tahr - Hemitragus jemlahicus

South India - Nilgiri Tahr - Hemitragus hylocrius

Himalayas, China, Korea - Goral - Nemorhaedus

Himalayas, West China - Takin - Budorcas taxicolor

Northeast India, Burma, Thailand, Malaysia, Laos, China, Taiwan, Japan - Serow Goat - Capricornis indica

North America - Rocky Mountain Goat - Oreamnos americanus

In sub-Saharan Africa there are no true wild goats. The closest equivalent animal is a small cliff-dwelling antelope, the Klipspringer Oreotragus oreotragus. The local name of this common, well-known animal has been used to translate ya‘el and ’aqo in many African translations.

In the remaining countries where no indigenous wild goats are found, or where specific words for such do not exist, a phrase equivalent to wild goat or wild mountain goat is usually used. The latter expression is probably

the better choice, because in West Africa particularly bush goat is the word for the duiker, a small antelope not associated with mountains.

PRO 5:19: This verse occurs in the middle of a series of proverbs dealing with the value of sexual restraint and faithfulness within marriage. The writer/editor exhorts his readers to find sexual fulfillment with their wives alone. A wife is then referred to as “a lovable [or attractive] deer, a graceful ibex.“

Discussion:

As mentioned above in the subsection of this section, there are many cultures in which to call a woman a “wild goat” would be an insult rather than a compliment. Where this is the case, a more suitable animal metaphor should be found which denotes gracefulness and can function as the parallel expression for “deer“.

DEU 14:4; DEU 14:5: The use of two words for wild goat in this list of clean animals should be avoided. However, it is advisable to translate ’aqo (that is, the seventh name in the list) as “ibex” or “wild goat“.
